Bondo Trust is a UK Registered Charity No: 1157379

REPORT ON BOREHOLE DRILLING AND MECHANISATION, BONGO SENIOR HIGH SCHOOL, BONGO DISTRICT, UER, GHANA

Carried Out 2014 – 2017

1. Implementation Strategies

The implementation approach was demand driven. As such the actors had the following roles/responsibilities:

1.1. Donors

- Fund mobilisation
- Set up standards and ensure quality
- Monitoring and evaluation

1.2. Bongo Development Organisation (Bondo Trust)

- Administer donor funds and write progress reports.
- Facilitate full community participation
- Conduct community and beneficiary identification
- Brief community regularly and get feedback
- Facilitate supply of materials and new pump system
- Supervise construction work of artisans
- Training of Water and Sanitation Committee) WATSAN committees\ Hygiene education
- Help solve conflicts and problems at different levels
- Concrete pad construction
- Old pump system and complete pump, pipework lift rods and pump barrel installation

Bongo Senior High school

The Bongo Senior High school has a population one thousand five hundred (1500). This school only had one borehole which was provided by project Bongo in and after year it was mechanised to pump water into the kitchen for the school to prepare meals for students. After two years we realised that students were still spending hours look for water to fetch during lesson times. I wrote to project Bongo in Shetland and when Peter came to Bongo after seeing what the problem was he agreed that there was the need for anther borehole so they approved for us to drill another extra borehole and mechanise it for students. When the funding came Bondo realised that we could drill two boreholes and mechanise one. Bondo then wrote to LWA for funding to construct concrete pad and install a new hand pump.

All the containers are for students waiting to be filled at Bongo Senior High School. Project Bongo financed the drilling and mechanisation of this borehole in 2014 two years after it was drilled and so there's no manual pumping to be done, just turn the tap. One 25litre container of water is meant to provide each pupil with a day's supply of water including drinking and washing.

This borehole is drilled by project Bongo and completed by LWA

This is Senior High School before – drilled by Project Bongo, Shetland

This is Senior High School after, completed by LWA

This is Bongo Senior High School Kitchen

Water flowing from new mechanised borehole (by Project Bongo, Shetland) Senior High School after

Project Bongo financed the drilling and mechanisation of this borehole this year which was connected to the kitchen and so there's no manual pumping of water.
